

# Galileoterminal.com 3.4

## Web based terminal for Galileo and Apollo GDS

Overview of the **new** version 3.4

The screenshot shows the login interface for Galileoterminal.com. At the top left, the text "GALILEOterminal.com" is displayed in a green header. The main content area features a central text block: "Welcome to Galileoterminal.com. This application allows you to access GDS Galileo via Internet. For accessing you have to enter your **username** and **password**." To the right of this text is the "powered by Travelport Galileo" logo. Below the text are two input fields: "USERNAME" and "PASSWORD", each with a corresponding text box. A blue "LOGON" button is positioned below the password field. At the bottom center, there is a blue button labeled "GALILEOTERMINAL.COM PRODUCT WEB SITE". The footer of the page contains the text "2009 © GALILEO C.E.E. SERVICE".

## Introduction

This document provides you with information about Galileoterminal.com 3.4 application, including:

-  System requirements
-  Security
-  Installation, Upgrades, Versions
-  Galileoterminal.com features
-  Introduction to Galileoterminal.com usage

You can find further information about Galileoterminal.com and its features on our product website at: <http://www.cee-systems.com>.

## What is Galileoterminal.com?

Galileoterminal.com has been designed for travel agents who may need to change travel arrangements in Galileo or Apollo at any time from anywhere. It is a unique application for accessing the Galileo or Apollo system using a standard Internet browser. The first version of this product was released in 2003 and since then our product has been upgraded several times to fulfill our clients' needs. All current contract conditions between the agency and Galileo or Apollo GDS remain the same while using Galileoterminal.com.

## Who is Galileoterminal.com most suitable for?

Galileoterminal.com provides any agency with all necessary tools for proper flight tickets booking and handling reservations, fare quoting, issuing/reissuing and refunding tickets. It is an ideal full-value tool to access Galileo or Apollo from an office computer, personal computer or from anywhere, where internet is accessible. In addition, travel agents who are "on the road" most of the time will find Galileoterminal.com the most useful application thanks to the possibility of booking and finalizing their customers' travel requirements remotely.

## System Requirements

- Mozilla Firefox 3+:
  - Minimal: Intel Celeron 2GHz or equivalent  
512MB RAM
  - Recommended: Intel Core 2 Duo 2GHz or equivalent  
1GB RAM
- Safari 4+:
  - Minimal: Intel Celeron 2GHz or equivalent  
512MB RAM
  - Recommended: Intel Core 2 Duo 2GHz or equivalent  
1GB RAM
- Internet Explorer 6+:
  - Minimal: Intel Pentium IV 3GHz or equivalent  
512MB RAM
  - Recommended: Intel Core 2 Duo 2GHz or equivalent  
1GB RAM
- Minimal supported resolution: 1024x768 16-bit color depth
- Operating system: Any capable of running the supported web browsers

## Installation Notes

There is no installation needed.

## Security

- Connection from agent browser to Galileoterminal.com servers uses SSL encryption.
- Connection from Galileoterminal.com servers to Galileo or Apollo host servers uses secured leased lines.
- Galileoterminal.com applies several security methods with a two-password combination against unauthorized usage.
- Galileoterminal.com account is locked when login fails 5 times and Country Administrator is informed about it via Galileoterminal.com Mail.

## Upgrades

All Galileoterminal.com users are using the most up to date version of our product. New versions are loaded seamlessly and Galileoterminal.com distributors / users are informed about new enhancements via Newsletters that are issued on a regular basis.

## Versions

Along with the Galileoterminal.com for standard browsers there is also Galileoterminal for Mobile version available. Please contact your closest Galileoterminal.com distributor or email us at [sales@galileoterminal.com](mailto:sales@galileoterminal.com) if you are interested.

## Galileoterminal.com features

Galileoterminal.com contains the following major features. (NEW) indicates that the feature is new in version 3.4.

### Getting Started

- The simplicity of implementation. No installation and no special software required.
- Galileoterminal.com is accessed as simply as you access other websites; all you need is an access to the Internet and a web browser.
- Galileoterminal.com allows users to use the same commands as in Focalpoint.
- Galileoterminal.com works directly with ClientIDs and Sign-ons defined for specific agency (PCC) within Galileo or Apollo host. This means that all host configuration settings / restrictions are applied for the Galileoterminal.com access.

### Terminal window

- Full featured terminal window is emulated where host commands and replies are displayed in the same window.
- Full support for editing of all host masks and full support of TAB key.
- Multiple terminal windows enabled.
- Host commands and replies history scrollable in the terminal window.
- Unique Galileoterminal.com transaction for 2line availability.
- Highlighted host responses for selected areas.
- Several color schemes and terminal window sizes to choose from.
- Local print support.

### Context window

- Switchable working areas.
- Commands history (including host mask).
- Quick navigation within history commands using CTRL+ARROW keystroke.
- Sequence of history commands can be selected and resent to the host automatically.

### Shortcuts window

- User's own shortcuts (hot keys) for time consuming or routine host commands
- User's own shortcuts (hot keys) for command sequences.
- User friendly and intuitive shortcuts editor.

### Links editor window

- User friendly and intuitive editor of *My Links* portion of the main menu.

### Calendar window

- Simple calendar for agent quick orientation.

## ViewTrip interface

- Just one click for actual reservation to be opened in a new window in ViewTrip.

## Itinerary support

- Just one click for actual or last ticketed reservation to be formatted and ready to be copied, printed out or emailed.
- Itinerary can be build based on entered record locator as well.
- Information displayed in the itinerary can be selected by an agent; available parts are: header, passenger, air segments, non-air segments, ticket info, fare and footer.
- HTML formatted text can be entered as an additional comment to the Itinerary. (NEW)
- HTML and TEXT format of the itinerary supported.
- Different formats of email supported.
- Itinerary options for: consultant name, URL of the agency logo placed on the itinerary, footer text, sender name, sender email address, default itinerary format.

## GTIR (Galileoterminal Interface Record)

- Information about issued ticket is stored after each TKP transaction on the Galileoterminal.com server in a XML formatted file.
- GTIR file can be uploaded automatically to the agency ftp server at the same moment
- Any record can be easily downloaded from Galileoterminal.com server using simple form.
- GTIR files are ready for further robotic processing by the agency Back-Office or accounting systems.

## eTracker (Galileoterminal.com eTracker)

- Galileoterminal.com eTracker module follows the design and functionality of widely known Galileo eTracker
- Galileoterminal.com eTracker keeps the information about the coupon statuses of the tickets issued through Galileoterminal.com only

## Mail

- Internal Galileoterminal.com Mail functionality available to all users.
- HTML format, attachments available (NEW)
- Quick and efficient channel for Helpdesk broadcasts, promos, ads etc.

## User profile

- Terminal window behaviour, Sales report and eTracker related settings, Galileoterminal.com documents – Direct print switches
- Language selection; password changes; itinerary options can be maintained in the administration section.

## Top header links

- Editable on three different levels:
  - Galileo Administrator level – displayed to all GT users worldwide
  - Country Administrator level – displayed to all GT users within a specific market
  - Agent level – displayed to specific agents only (*My links*)

## Documents compiled by Galileoterminal.com

- Itinerary, Agent Coupon, Credit Card Charge Form, Refund Notice can be printed out from Galileoterminal.com even if there is no linkage or Galileo Print Manager available.

## Sales Report to File

- The data from Sales report can be stored in file using FILE-SR command in Terminal window. The file format shall be selected in *My profile – Settings – Report format* list box (please see *My profile* paragraph below for details).

## Administration tools

- Logs and statistics available for each Galileoterminal.com access.
- Four levels of Galileoterminal.com access:
  - Galileoterminal Administrator
  - Country Administrator
  - Agency Administrator
  - Agent

## Tips and Tricks

- A single click on Galileoterminal.com logo moves the main menu to the most upper layer (over all opened windows) the next click on the logo moves the menu back to its initial position.
- A double click on history host command in Context window sends the command to the host automatically.
- A sequence of entries can be typed into a terminal window directly; each command has to be separated by „|“ sign.
- Highlighted shortcuts are sent to the host immediately others need to be transmitted by enter key.
- An empty line is not sent to the host by pressing enter key.
- The layout of all opened windows within Galileoterminal.com workspace is stored while logging off.
- An unlimited number of Terminal windows can be opened.
- The data from Sales report can be printed out even if there is no linkage or Galileo Print Manager available. Galileoterminal.com will compile printer output for you. (please see *My profile* paragraph below for details).
- The data from Sales report can be stored in file using FILE-SR command in Terminal window. The format of the stored file shall be selected in *My profile – Settings – Report format* list box (please see *My profile* paragraph below for details).

The syntax of the command is:

**FILE-SR/PCC/DDMMM-DDMMM/CU-XXX**

where:

**PCC** – is the PCC of the branch

**DDMMM-DDMMM** – is the date period (32 days in the past when any ticket was issued is the max)

**CU** – is the currency parameter

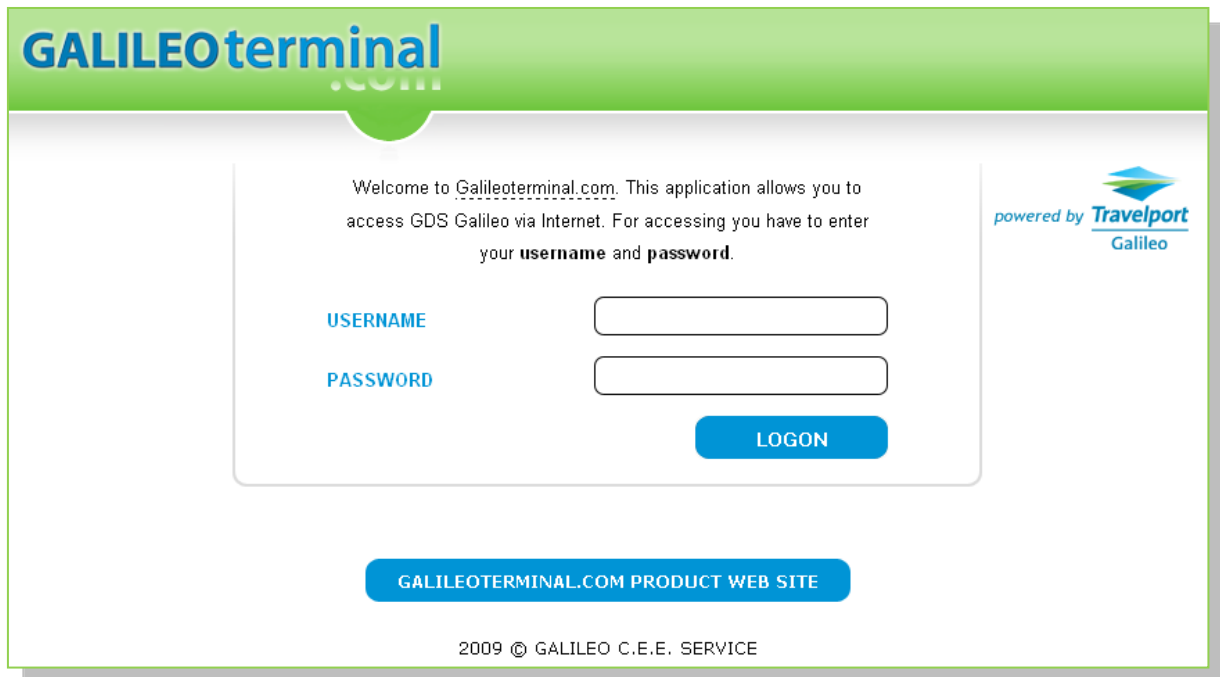

**XXX** – is the currency 3 letter code

- Shortcut combination CTRL+W clears the content of active terminal window and CTRL+S clears the content of all opened terminal windows.
- +J entry returns Client ID mapped to actual Galileoterminal.com account and displays it in the terminal window.

## Introduction to Galileoterminal.com usage

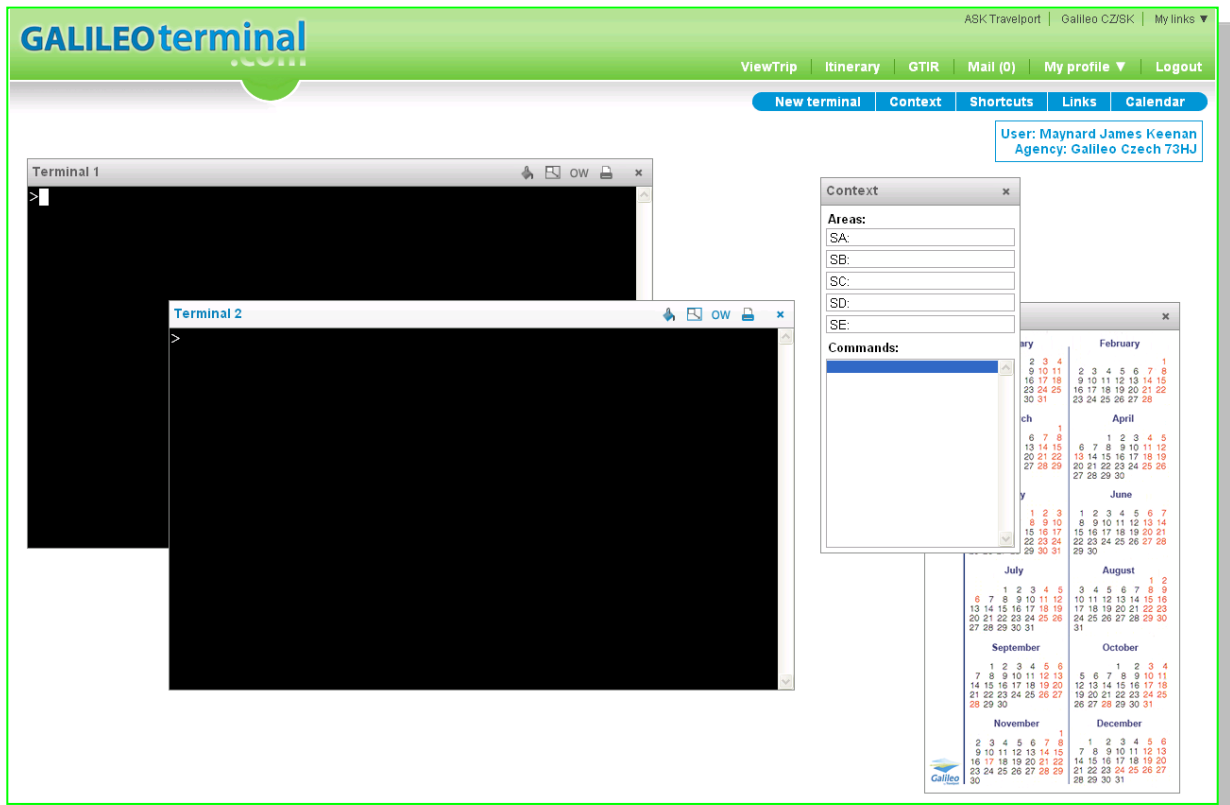

### How to start

Just open your Internet browser and type <http://galileoterminal.com> in to the address line. Enter the Galileoterminal.com username and password.

The screenshot shows the Galileoterminal.com login interface. At the top, there is a green header with the text "GALILEOterminal.com". Below this, a white box contains a welcome message: "Welcome to Galileoterminal.com. This application allows you to access GDS Galileo via Internet. For accessing you have to enter your **username** and **password**." To the right of this message is the "powered by Travelport Galileo" logo. Below the message are two input fields: "USERNAME" and "PASSWORD", each with a corresponding text box. A blue "LOGON" button is positioned below the password field. At the bottom of the white box, there is a blue button labeled "GALILEOTERMINAL.COM PRODUCT WEB SITE". Below the white box, the copyright notice "2009 © GALILEO C.E.E. SERVICE" is displayed.

Default layout of Galileoterminal.com windows will appear. You can open / close any window by clicking on the desired item in blue menu and arrange all windows within Galileoterminal.com workspace as it suits you the best. Then, you just sign-on to Galileo or Apollo system in the same way as in Focalpoint and use the same type of entries as you do normally when working with Galileo or Apollo GDS.

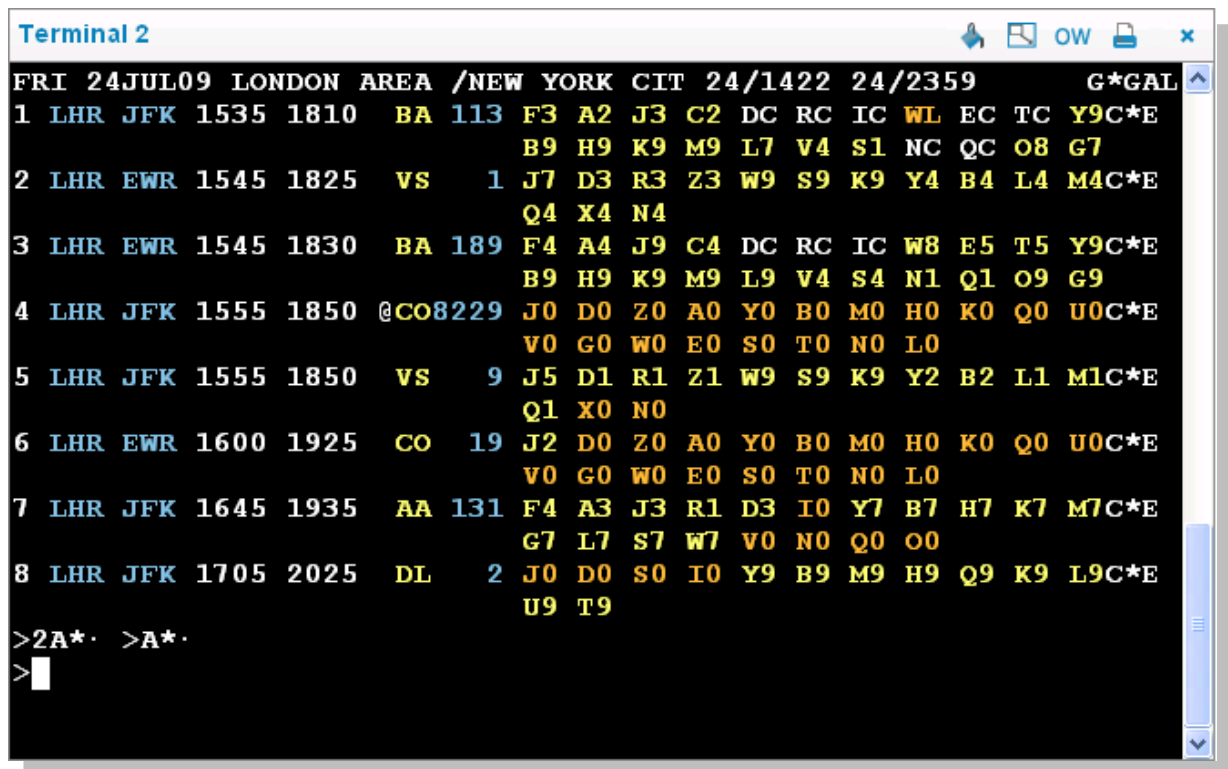

## Galileoterminal.com blue menu description

Following is a full description of all windows available within Galileoterminal.com workspace. All the windows can be opened/closed by clicking on the blue menu item.

### New terminal

Working within the terminal window is the same as in Focalpoint. There is one Galileoterminal.com enhancement – TWO LINE AVAILABILITY. Enter 2A instead of A while asking for availability display and you will get two lines of reply for each flight. It means that all booking classes and their statuses are visible. No more additional entries are necessary. The system response is highlighted for quicker and easier orientation. Up to 12 last commands and replies can be stored in the terminal window's history and available for scrolling.

The meaning of the window toolbar icons in the upper right site is as follows:

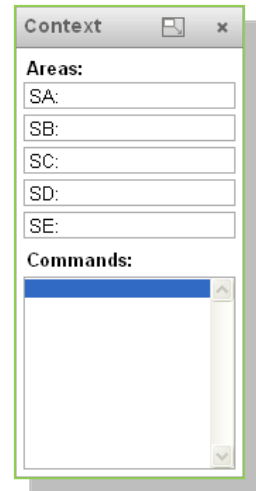

-  - For color scheme selection
-  - For terminal window size changes
-  - For inserting/overwriting mode switch
-  - For local print of the window content

### Context

*Context* window allows agents to quickly change working areas by clicking on SA:, SB:, SC:, SD:, SE: field. The actual working area is always highlighted. Last command is displayed beside.

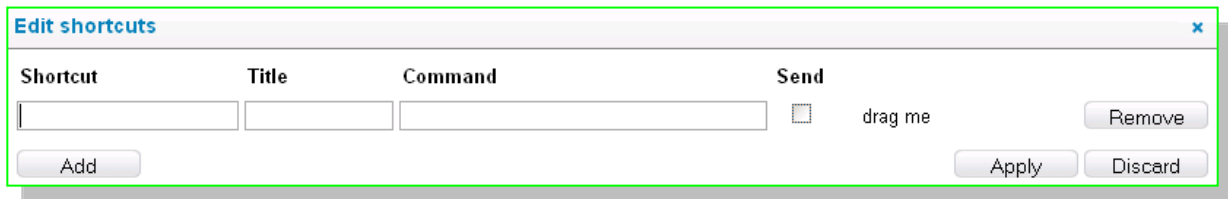

There is a list of all history commands (up to 50). You can resend any of it just by simply double-clicking on it. You can also select a block of commands with SHIFT (coherent) or CTRL (incoherent) key for sequential resend of all of them. CTRL+ARROW keystroke helps to move within sent commands.

The size of the *Context* window can be adjusted. (NEW)

### Shortcuts

Click on *Shortcuts* item of the blue menu and the Shortcuts panel will open. Click on pen icon to open Shortcuts editor.

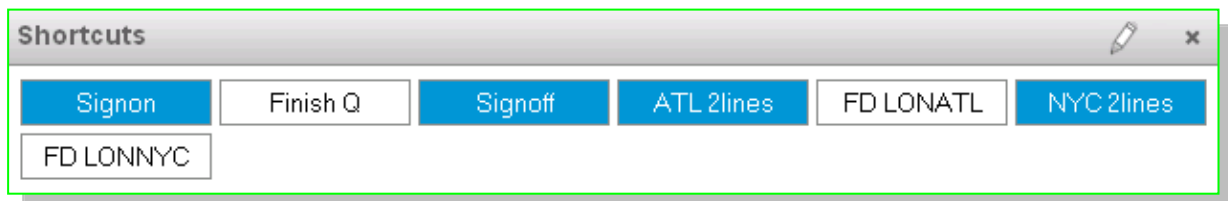

The meaning of form fields is as follows:

- Shortcut* - Press the desired key or key combination (Ctrl + K for example) to fill in this field
- Title* - The shortcut title will be shown on the Shortcuts panel
- Command* - String to be typed in terminal window when the shortcut is pressed or clicked on from the Shortcuts panel
  - Multiple commands can be entered split by ,|' sign
- Send* - The command string is sent to the host automatically when the shortcut is pressed or clicked on from the Shortcuts panel

Using *'drag me'* feature the items can be rearranged very easily on the screen.

Here is an example of Shortcuts panel:

The highlighted click buttons are those with automatic *Send* option checked.

## Links

Links editor is open when *Links* item from the blue menu is clicked on.

Title	Web address		
book hotel	www.octopustravel.cz	drag me	Remove
Add		Apply	Discard

Every Galileoterminal.com user can define her/his own links that are available under *My links* item shown on the right top end of the green menu.

## Calendar

Simple calendar is opened/closed in Galileoterminal.com window while clicking on *Calendar* item of the blue menu.

Full (12 months) and shortened (3 months) versions are available and the size of the *Calendar* window can be adjusted. ([NEW](#))

## Galileoterminal.com green menu description

Following is the full description of all items of Galileoterminal.com main menu (green menu).

### ViewTrip

There is an interface to Travelport ViewTrip application directing Galileoterminal.com user to ViewTrip pages while clicking on *ViewTrip* item in the green menu. The actual reservation opened in Galileoterminal.com is retrieved and displayed on the ViewTrip web page when agent presses the *ViewTrip* item.

### Itinerary

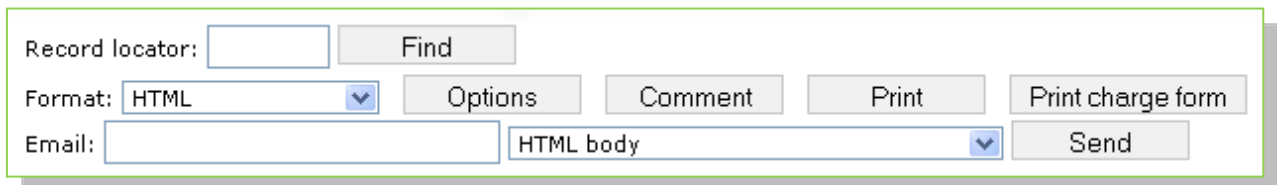

If a Galileoterminal.com user would like to provide passengers with an itinerary then the *Itinerary* item in the green menu should be used. The itinerary can be copied into a file, printed out or sent to the passenger's mailbox.

Clicking on this item can lead to three different situations:

- If there is no actual reservation retrieved in the terminal window and there has never been any ticket issued from this Galileoterminal.com account, then a search form followed by a blank page is displayed
- If there is no actual reservation retrieved in the terminal window but there was a ticket issued from this Galileoterminal.com account, the itinerary is built from the record stored during the last ticket issuance.
- If there is an actual reservation retrieved in the terminal window, the itinerary is built based on actual data retrieved from the host on-line.

There is always a note explaining for which reservation and from which source the itinerary was built.

Below is a description of search form fields

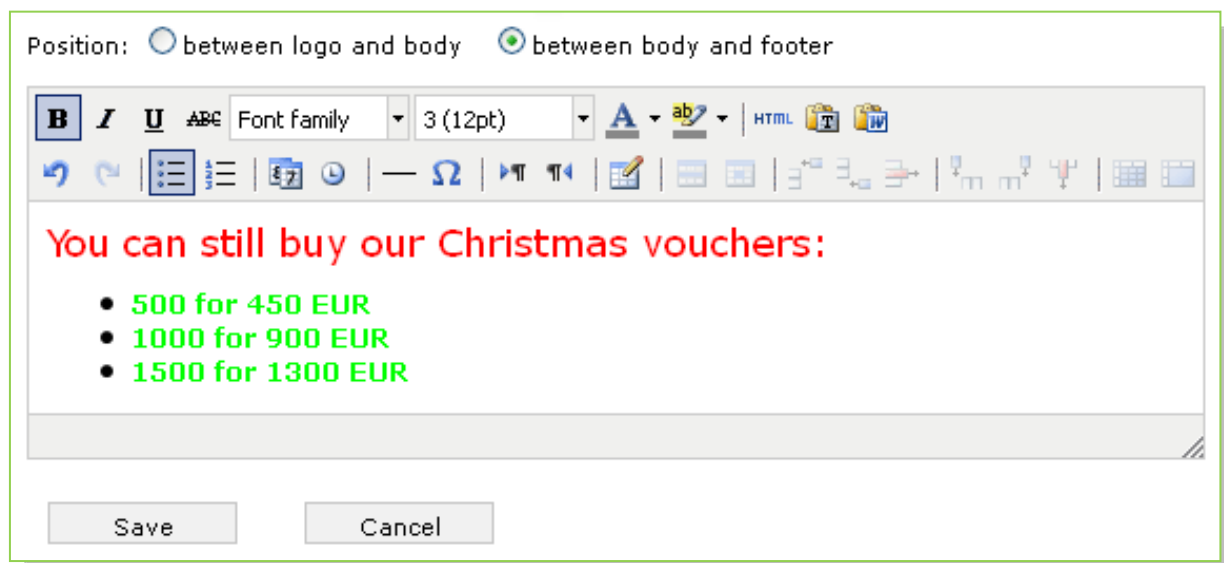

Record locator:  Find

Format:  Options Comment Print Print charge form

Email:   Send

- Record locator:** - every reservation available for agency PCC can be retrieved and itinerary can be built
- Format:** - desired format of the itinerary (HTML or TEXT)
- Options:** - further options of itinerary appearance
- Email:** - email address where the itinerary is to be sent to and format of the email
- Print charge form** - button is available when Credit Card has been used for payment for the given reservation.
- Comment: (NEW)** - free HTML formatted text can be added to the itinerary;  
 - the position of the comment on the itinerary can be either between logo and body or between body and footer;  
 - there is an intuitive HTML WYSIWYG editor available to help the agent to add desired content in desired design

Position:  between logo and body  between body and footer

**You can still buy our Christmas vouchers:**

- 500 for 450 EUR
- 1000 for 900 EUR
- 1500 for 1300 EUR

Save Cancel

Several itinerary options can be set up using *Options* push button mentioned above. Selected options apply for all future itineraries requested using particular Galileoterminal.com access.

Those are seven options affecting the itinerary appearance:

- Logo URL:** - For URL address of the agency logo which should be placed on the itinerary
- Footer text:** - For any free form text, the agency wants to display on the itinerary
- Consultant Name:** - For agent name taking care of the reservation
- Sender name:** - For the name to be displayed as a sender of the email with the itinerary
- Sender email:** - For the email address to be displayed as a sender of the email with the itinerary
- Visible blocks:** - define what parts of the itinerary are displayed
- Default format** - HTML or TEXT format of the itinerary can be selected

Logo URL:

Footer text:

Consultant Name:

Sender name:

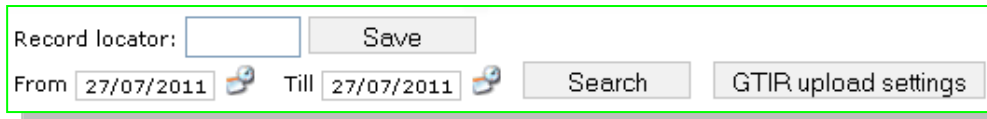

Sender email:

Visible blocks:  header  passenger  air segments  non-air segments  ticket info  fare  footer

Default format:

### GTIR (Galileoterminal Interface Record)

For the Back-Office and accounting purposes Galileoterminal.com provides agencies with XML structured records of all reservations ticketed via Galileoterminal.com accounts. The record is created at the moment of the TKP transaction (parameterized TKP entries are also covered) and stored on Galileoterminal.com servers. All records are available for the agency via simple form under GTIR item of the green menu.

Record locator:  Save

From  Till  Search GTIR upload settings

GTIR can be retrieved for a unique reservation, by the Record Locator or by a list of reservations that can be used for selection of reservations for the download. More sophisticated and robotic methods can be used for GTIR downloads. Please contact your Galileoterminal.com distributor directly for details you are interested in.

### Auto-upload of the GTIR file

GTIR settings can be open from the green menu items either via *GTIR* → *GTIR upload settings* button or via *My profile* → *GTIR* item.

Following table with GTIR auto-upload settings is displayed. *GTIR automatic upload* check box controls if GTIR is uploaded automatically after TKP transaction or not. If this box is checked, proper values of the FTP server of the agency have to be entered into the value fields.

Item	Value
GTIR automatic upload:	<input type="checkbox"/>
FTP server:	<input type="text"/>
Username:	<input type="text"/>
Password:	<input type="text"/>
Save	

## eTracker

Galileoterminal.com eTracker module allows Galileoterminal.com users to check the statuses of all coupons issued through Galileoterminal.com within agency PCC.

There is a search form available for setting up the selection parameters and clear table with report result is displayed when request is processed. The statuses are updated on regular basis as well as it can be done on demand just by click on the ticket status. The statuses of all displayed coupons can be refreshed by click on the *Refresh status of all coupons* button ([NEW](#)). Agent can also retrieve a detail and void the ticket by click on the ticket number in the list and Void button in newly open window. ET report can be printed out or exported either in CSV or XML formatted file. eTracker is not available to all Galileoterminal.com users by default. The module can be turned on for an agency on demand. Please address your interest to you nearest Galileoterminal.com distributor or to us at [sales@galileoterminal.com](mailto:sales@galileoterminal.com).

## Mail

Galileoterminal.com Mail has been developed to allow Galileoterminal or Country Administrator to send announcements to Galileoterminal.com users. These announcements can be for example about new functionalities, planned trainings, planned system outages, advertisements, reminders etc. Galileoterminal.com Mail can be used by all Galileoterminal.com users.

Country Administrator can send global emails to all agents within a specific market. S/he can also address Galileoterminal.com users within specific agency only. Or just single Galileoterminal.com user can be addressed.

Agent can address the message to the Country Administrators within respective market. Country Administrator can address the message to the Galileo Administrator. (NEW)

HTML WYSIWYG editor is available for composing the mail and attachments can be enclosed. (NEW)

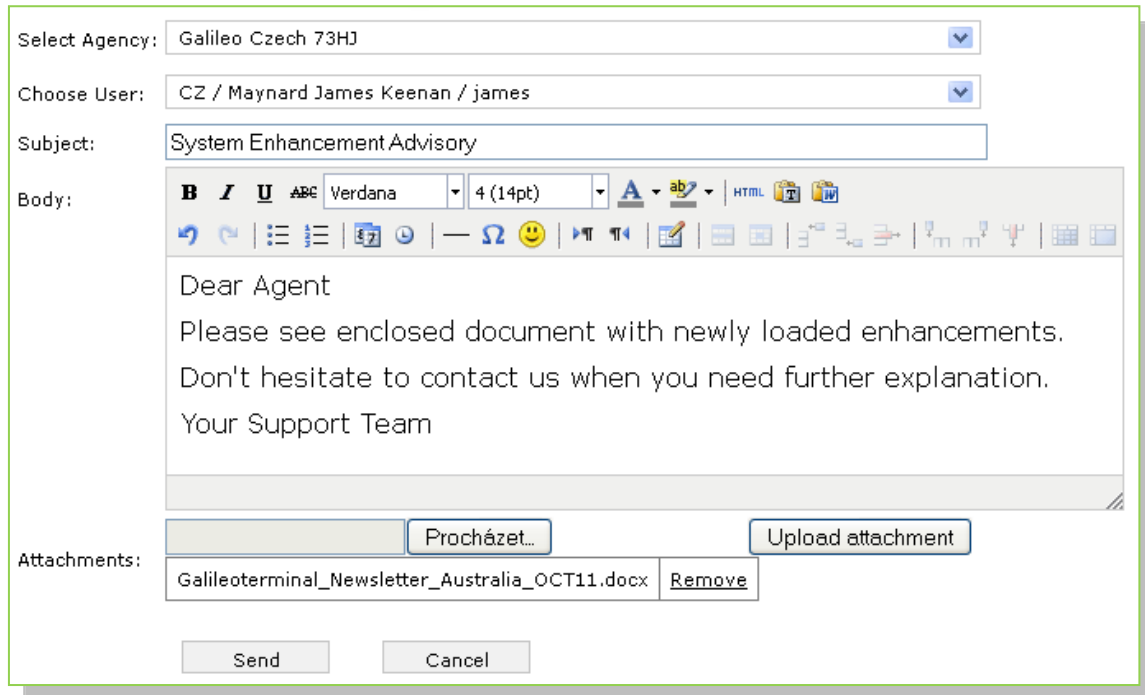

Click on a *Mail* item in the green menu to open a mailbox. Similar screen to this one will be opened.

Inbox <span style="float: right;">Write mail</span>

## My profile

There are four sub-items within the *My profile* item of the green menu:

### 1. Settings where you can find:

-  - Choose your language - for language preference
-  - Pages of history - to set the number of pages stored as scrollable in the Terminal window
-  - Emulate P-HMPR - to enable automatic print of Sales report even if there is no linkage or Galileo Print Manager available. Galileoterminal.com builds printer output from the screen replies of the host while P-... command is entered. Compiled output is sent to the local printer then. Having this feature off regular output is sent to the linked printer GTID. Supported commands are P-HMPR, P-HMPP, P-HMPS, P-HMPR\*E.
-  - Report format - to choose the format of Sales report file. The file is generated by the Galileoterminal.com when FILE-SR command is entered in the Terminal window. See Tips and Tricks for proper syntax. User is asked by the browser if it should be open or save.
-  - eTracker lines per page: - to set up the number of lines displayed on eTracker report. This item is available only when eTracker module is turned on.
-  - Direct print - to select what documents are compiled by Galileoterminal.com and offered to be printed out when TKP command is entered (itinerary, agent coupon, CC charge form) or refund is done (refund notice).

Item	Value
Choose your language:	English 
Pages of history:	12 
Emulate P-HMPR:	<input checked="" type="checkbox"/>
Report format:	XLS 
eTracker lines per page:	50
Direct print:	<input checked="" type="checkbox"/> itinerary <input checked="" type="checkbox"/> agent coupon <input checked="" type="checkbox"/> charge form <input checked="" type="checkbox"/> refund notice
<input type="button" value="Save"/>	

2. *Password* - for Galileoterminal.com access password changes

Items	Values
Old password:	<input type="password" value="*****"/>
New password:	<input type="password"/>
Reenter new password:	<input type="password"/>
<input type="button" value="Save"/>	

3. *Itinerary* - for itinerary setup (see *Itinerary* section above for details)

4. *GTIR* - for GTIR auto-upload setup (see *GTIR* section above for details)

**Users (NEW)**

*Users* item of the green menu is displayed only to Galileoterminal.com users with Agency Administrator level of access. This link can be used for basic maintenance of the Galileoterminal.com accesses within the agency.

Agency Administrator can display the list of all Galileoterminal.com accounts defined under particular agency by clicking on the *Users* item.

Name of the user	Agency	Right	Version	Type of action
Galileo Ukraine Demo	UA Galileo Demo 5JW7	Agent	GT+GTM	<input checked="" type="checkbox"/>
Maynard James Keenan	UA Galileo Demo 5JW7	AgencyAdmin	GT+GTM	<input checked="" type="checkbox"/>
training1	UA Galileo Demo 5JW7	Agent	GT	<input checked="" type="checkbox"/>
training10	UA Galileo Demo 5JW7	Agent	GT	<input checked="" type="checkbox"/>
training11	UA Galileo Demo 5JW7	Agent	GT	<input checked="" type="checkbox"/>

The details of the particular account are displayed when yellow check box in the *Type of action* column is clicked.

training1	
Name of the user:	<input type="text" value="training1"/>
Username:	<input type="text" value="training1"/>
* Password:	<input type="text"/>
Active:	<input checked="" type="checkbox"/>
Signing Code:	<input type="text" value="SON/ZT0"/>
Language:	<input type="text" value="По-русски"/>
Pages of history:	<input type="text" value="10"/>
Default format:	<input type="text" value="---"/>
Report format:	<input type="text" value="---"/>
Consultant Name:	<input type="text"/>
Sender name:	<input type="text"/>
Sender email:	<input type="text"/>
Visible blocks:	<input checked="" type="checkbox"/> header <input checked="" type="checkbox"/> passenger <input checked="" type="checkbox"/> air segments <input checked="" type="checkbox"/> non-air segments <input checked="" type="checkbox"/> ticket info <input checked="" type="checkbox"/> fare <input checked="" type="checkbox"/> footer
	<input type="checkbox"/> Emulate P-HMPR

Some of the parameters are displayed for information only (*Name of the user, Username, Signing Code*) while the others can be modified:

- *Password* - for password reset purposes
- *Active* - to activate locked/frozen accounts
- *Language* - the language of the Galileoterminal.com Front-End
- *Pages of history* - the number of pages stored in terminal window
- *Default format* - the default format of the itinerary
- *Report format* - the format of the Sales Report file
- *Consultant Name, Sender name, Sender email, Visible blocks* - displayed on the itinerary
- *Emulate P-HMPR* - to compile Sales Report printer output when Galileo Print Manager is not available or linkage to printer GTID cannot be used

---

### **Administration (NEW)**

*Administration* item of the green menu is displayed only to Galileoterminal.com users with Country Administrator level of access. This link can be used for basic maintenance of the Agency and User setup as well as for the view to the Statistics. Please contact us at [support@galileoterminal.com](mailto:support@galileoterminal.com) if you are Country Administrator and need more information.

### **Terminal**

Terminal item in the green menu is available for a quick return to the tab / window with Terminal window open.

### **Logout**

Logout link for logging out from the Galileoterminal.com application.
